

# Principles of Health Science

The student demonstrates professional standards/employability skills as required by business and industry. The student is expected to:

- 1A** express ideas in a clear, concise, and effective manner;
- 1B** exhibit the ability to cooperate, contribute, and collaborate as a member of a team; and
- 1C** identify employer expectations such as punctuality, attendance, time management, communication, organizational skills, and productive work habits.

The student applies mathematics, science, English language arts, and social studies in health science. The student is expected to:

- 2A** convert units between systems of measurement
- 2B** apply data from tables, charts, and graphs to provide solutions to health-related problems;
- 2C** interpret technical material related to the health science industry;
- 2D** organize, compile, and write ideas into reports and summaries;
- 2E** plan and prepare effective oral presentations;
- 2F** formulate responses using precise language to communicate ideas;
- 2G** describe biological and chemical processes that maintain homeostasis;
- 2H** identify and analyze principles of body mechanics and movement such as forces and the effects of movement, torque, tension, and elasticity on the human body;
- 2I** identify human needs according to Maslow's Hierarchy of Human Needs;
- 2J** describe the stages of development related to the life span;
- 2K** identify the concepts of health and wellness throughout the life span;
- 2L** analyze and evaluate communication skills for maintaining healthy relationships throughout the life span;
- 2M** research the historical significance of health care;
- 2N** describe the impact of health services on the economy;
- 2O** analyze the impact of local, state, and national government on the health science industry;

---

**2P** identify diverse and cultural influences that have impacted contemporary aspects of health care delivery; and

---

**2Q** Research and compare practices used by various cultures and societies to solve problems related to health.

---

The student uses verbal and nonverbal communication skills. The student is expected to:

**3A** identify components of effective and non-effective communication;

---

**3B** demonstrate effective communication skills for responding to the needs of individuals in a diverse society;

---

**3C** evaluate the effectiveness of conflict-resolution techniques in various situations; and

---

**3D** accurately interpret, transcribe, and communicate medical vocabulary using appropriate technology.

---

The student implements the leadership skills necessary to function in a democratic society. The student is expected to:

**4A** identify traits of a leader;

---

**4B** demonstrate leadership skills, characteristics, and responsibilities of leaders such as goal-setting and team building; and

---

**4D** demonstrate the ability to effectively conduct and participate in meetings.

---

The student assesses career options and the preparation necessary for employment in the health science industry. The student is expected to:

**5A** locate, evaluate, and interpret career options and employment information; and

---

**5B** recognize the impact of career decisions, including the causes and effects of changing employment situations.

---

(6) The student identifies academic preparation and skills necessary for employment as defined by the health science industry. The student is expected to identify academic requirements for professional advancement such as certification, licensure, registration, continuing education, and advanced degrees.

**6** (6) The student identifies academic preparation and skills necessary for employment as defined by the health science industry. The student is expected to identify academic requirements for professional advancement such as certification, licensure, registration, continuing education, and advanced degrees.

---

The student identifies the career pathways related to health science. The student is expected to:

- 7A compare health science careers within the diagnostic, therapeutic, health informatics, support services, and biotechnology research and development systems; and
- 7B identify the collaborative role of team members between systems to deliver quality health care.

The student examines the role of the multidisciplinary team in providing health care. The student is expected to:

- 8A explain the concept of teaming to provide quality health care; and
- 8B examine the role of professional organizations in the preparation and governance of credentialing and certification.

The student interprets ethical behavior standards and legal responsibilities. The student is expected to:

- 9A compare published professional codes of ethics and scope of practice;
- 9B explain principles of ethical behavior and confidentiality, including the consequences of breach of confidentiality;
- 9C discuss ethical issues related to health care, including implications of technological advances;
- 9D examine issues related to malpractice, negligence, and liability; and
- 9E research laws governing the health science industry.

The student recognizes the rights and choices of the individual. The student is expected to:

- 10A identify situations related to autonomy;
- 10B identify wellness strategies for the prevention of disease;
- 10C evaluate positive and negative effects of relationships on physical and emotional health such as peers, family, and friends in promoting a healthy community;
- 10D review documentation related to rights and choices; and
- 10E demonstrate an understanding of diversity and cultural practices influencing contemporary aspects of health care.

The student recognizes the importance of maintaining a safe environment and eliminating hazardous situations. The student is expected to

- 11A identify governing regulatory agencies such as the World Health Organization, Centers for Disease Control and Prevention, Occupational Safety and Health Administration, U.S. Food and Drug Administration, Joint Commission, and National Institute of Health;
- 11B identify industry safety standards such as standard precautions, fire prevention and safety practices, and appropriate actions to emergency situations; and

---

**11C** relate safety practices in the health science industry.

---

The student identifies the technology used in the diagnostic, therapeutic, health informatics, support services, and biotechnology research and development systems. The student is expected to:

**12A** research and identify technological equipment used in the diagnostic, therapeutic, health informatics, support services, and biotechnology research and development systems;

---

**12B** identify potential malfunctions of technological equipment; and

---

**12C** recognize and explain the process for reporting equipment or technology malfunctions.
